

Vacuum Varnish Impregnation Machine Drying Plant For H-Class Vacuum Resin Casting Machine

Our Product Introduction

for more products please visit us on jc-transformer.com

Basic Information

- Place of Origin: China
- Brand Name: JC
- Certification: SGS CE,UL
- Model Number: KCY-9000
- Minimum Order Quantity: 1 pcs
- Price: consult
- Packaging Details: Export standard packaging
- Delivery Time: 5 days
- Payment Terms: L/C, T/T, Western Union, MoneyGram
- Supply Ability: 100pcs/month

Product Specification

- Working Pressure: Atmospheric Pressure
- Control Mode: Rocn Screen
- Pressure Level: Low Pressure ($0.1\text{MPa} \leq p < 1.6\text{MPa}$)
- Capacity: Customized
- Design Cooling: Customized
- Design Temperature: Customized
- Heating Mode: Electric Heating
- Material: Stainless Steel
- Power: 2.2KW
- Product Name: Pressure Increasing Drying Plant
- Voltage: 220V
- Control Mode: Automatic
- Drying Capacity: High
- Power Source: Electricity
- Pressure Increasing Range: 0.1-0.6MPa

Product Description

Pressure Increasing Vacuum Impregnation Drying Plant for H-Class Insulating Dry-Type Transformers

Application scope:

The vacuum pressure impregnation equipment for traction transformers is mainly used in the impregnation production of products such as traction transformers and H-grade insulated dry-type transformers.

The transformer coil can be effectively dehydrated and degassed by vacuum pressure impregnation; Under pressure, the insulation paint deeply penetrates into the interior of the insulation structure, strengthening the overall insulation, thereby improving the insulation level and improving the electrical performance of the product.

Our Product Introduction

for more products please visit us on jc-transformer.com

Product Description:

Vacuum impregnating equipment mainly used in insulation of electrical products. Such as high voltage motors and wind generators, h class insulating dry-type transformers, power capacitors, cable insulation material impregnated, and so on. Products such as motor or transformer windings through vacuum impregnation, vacuum phase in addition to water, gas, reduce the effects of impurities such as water, gas insulated; can be made completely in a vacuum effect into the insulation of internal to strengthen the overall insulation, improved insulation levels, improved electrical properties.

Vacuum impregnating equipment is also used in the materials industry to solve materials modification and improvement of organizational structure, achieve the objective of improved performance. Graphite products, engine housings, precision casting, refractory brick, wood, etc. By means of vacuum pressure impregnation, enhance the density of graphite, phenomena such as increased strength and microleakage and improve the qualified products and the Elimination of leakage of the workpiece itself.

KV Vacuum impregnating equipment is divided into:

KVC Vacuum pressure impregnating equipment

KVY The vacuum pressure impregnation equipment
